TechX Labs, Inc.

Capability Statement · K-12 & Workforce AI and Software Education

support@techx.dev
techx.dev/schools

TechX Labs is a Boston-based education technology company. Students and early-career learners build real software and AI projects on the TechX platform and in small teams led by engineers from Google, Microsoft and Meta, and leave with certificates and a verified portfolio.

CORE COMPETENCIES

- Project-based learning platform: self-paced tracks in AI, software and data, from no-code to advanced, with automatic checks and certificates
- Verified student portfolios that show completed projects to colleges and employers
- Mentor-supervised project teams led by working engineers
- Staff onboarding and educator workshops
- Program data collection and reporting: surveys, participation, implementation tracking, dashboards and exports
- Custom software and AI development

WHAT SETS US APART

- Mentors are engineers who build software for a living
- Completion is checked automatically, so certificates mean something
- Reporting is built into the platform, not added afterwards
- Student data privacy by default: no selling data, no ads, no accounts under 13
- Massachusetts-based team

TRACK RECORD

- 570+ early-career engineers from 300+ universities have built projects with TechX mentors
- Platform partnerships in higher education and EdTech
- TechX LaunchPad summer program for ages 13–19, Summer 2027
